# Vulnerability Alert pgAdmin 4 contains a high-risk security vulnerability (CVE-2026-17566). Please verify and apply patches as soon as possible.

- Subject: Vulnerability Alert pgAdmin 4 contains a high-risk security vulnerability (CVE-2026-17566). Please verify and apply patches as soon as possible.

- Description:
  - Forwarded from National Information Sharing and Analysis Center (NISAC) Information Security Alert NISAC-200-202608-00000003
  - Researchers have discovered a high-risk OS Command Injection security vulnerability (CVE-2026-17566) in pgAdmin 4. Due to improper handling of SQL queries in pgAdmin 4's Import/Export Data tool, an authenticated remote attacker could exploit this vulnerability to execute arbitrary code. Please verify and apply patches as soon as possible.
- Affected Platforms:
  - pgAdmin 4 versions 1.0 through 9.16
- Recommendations:
  - The vendor has released patch updates for this vulnerability. Please refer to the official announcement to update, URL as follows: https://www.postgresql.org/about/news/pgadmin-4-v917-released-3356/
