

Instruction for changing the permission and attributes of files

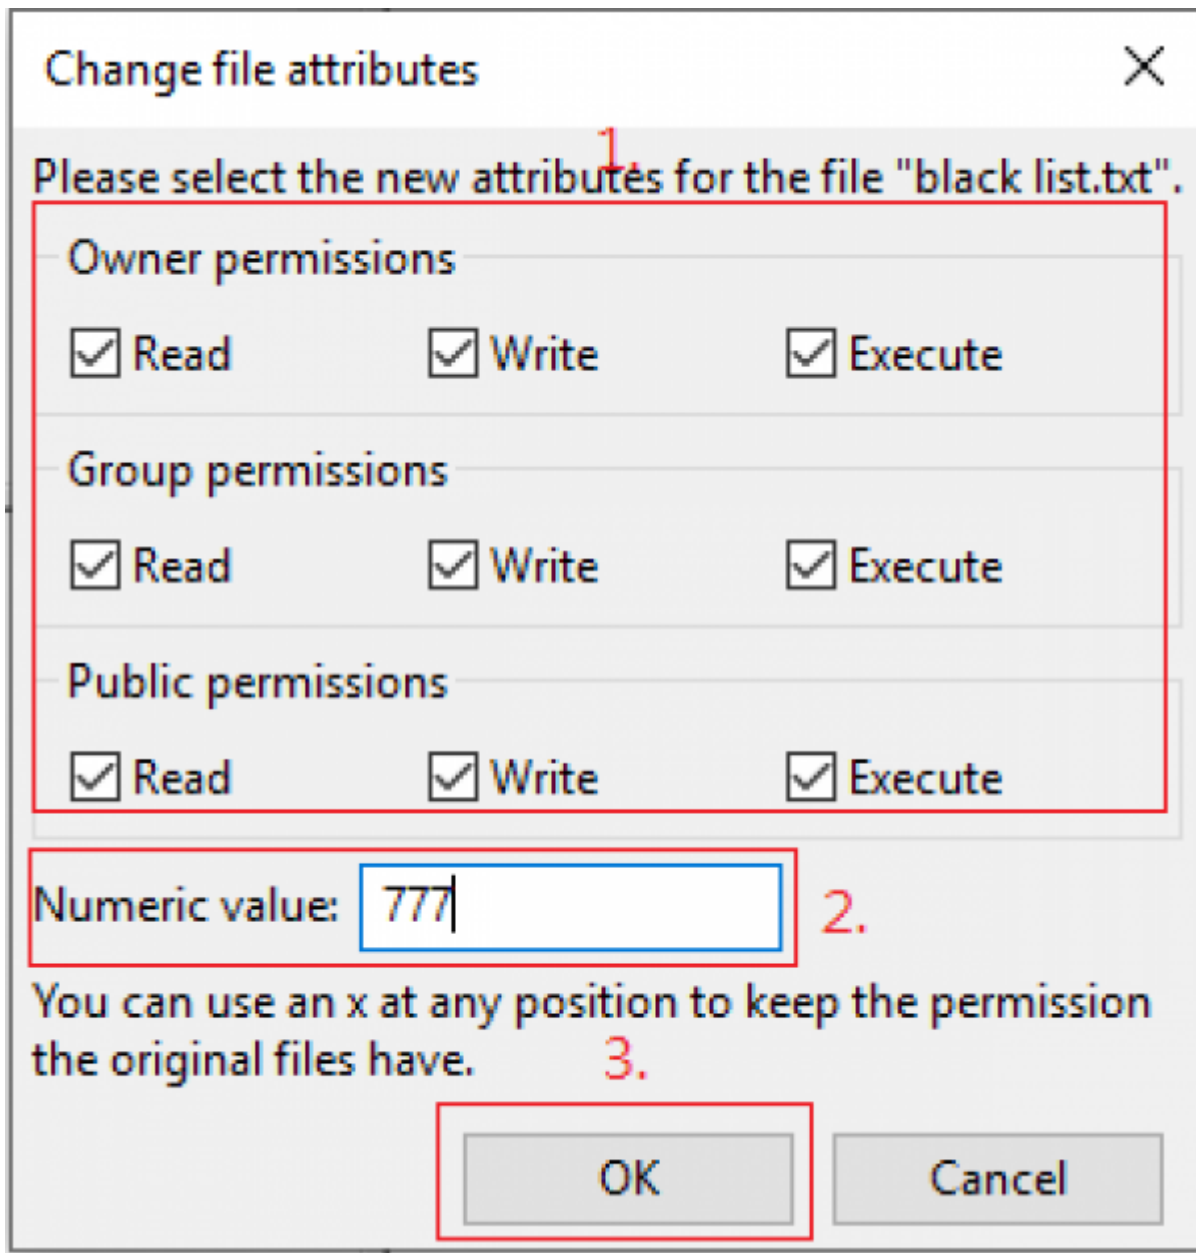

Step 1

1. After getting connected via FileZilla, right click on the file you want to change its access permission.
2. Select “the permission of file”.

Step 2

1. Click on the access permission you need, determine the permissions of file owner, group and public.
2. To change the attribute of the file, change the value. You can also select the directory to change all the attributes of files.
3. Click on “OK” to finish the setting.
