

How to set up network TCP/IP

Description

The following setting examples are mainly based on Apple macOS Sequoia 15.x. For macOS Monterey 12.x users, please check [HERE](#)
[Windows 11](#) users check [HERE](#)
[Windows 8/10](#) users check [HERE](#).
[WiFi Router](#) users check [HERE](#)

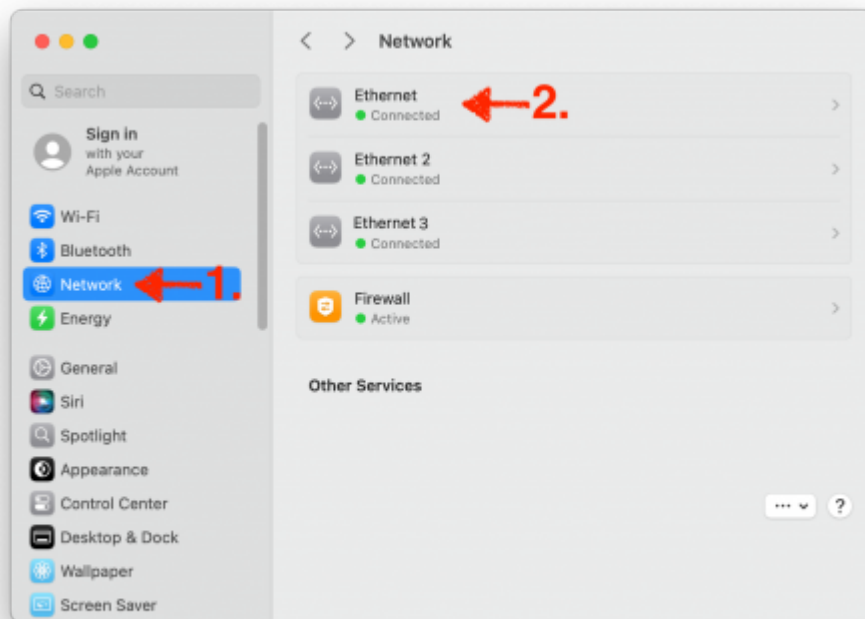

Step1

- In the upper left corner of the screen, click “Apple”, then click “System Settings”, as shown below: □

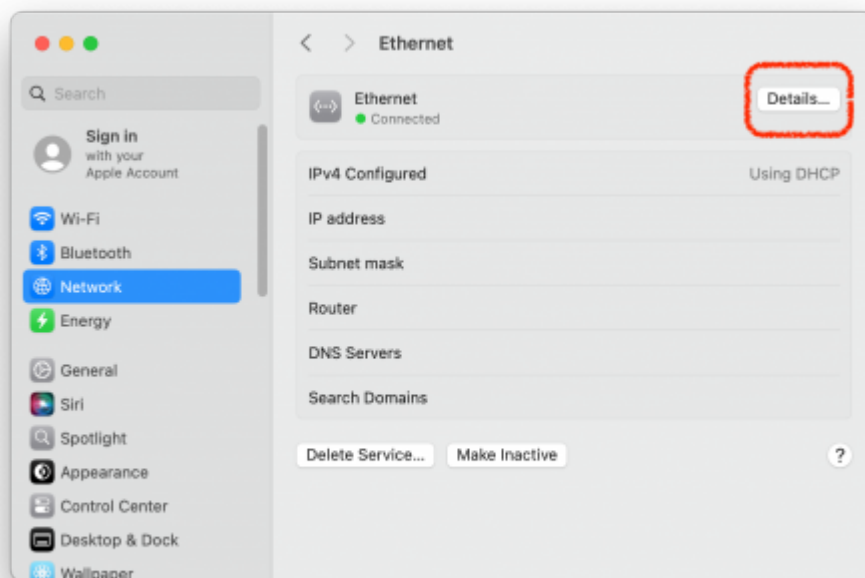

Step2

- Click “Network” and then click “Ethernet”. It varies depending on the Apple computer model. In addition to Ethernet, it may also be USB 10/100/1000 Ethernet, Thunderbolt Ethernet or others. The settings are the same depending on the model. As shown below:

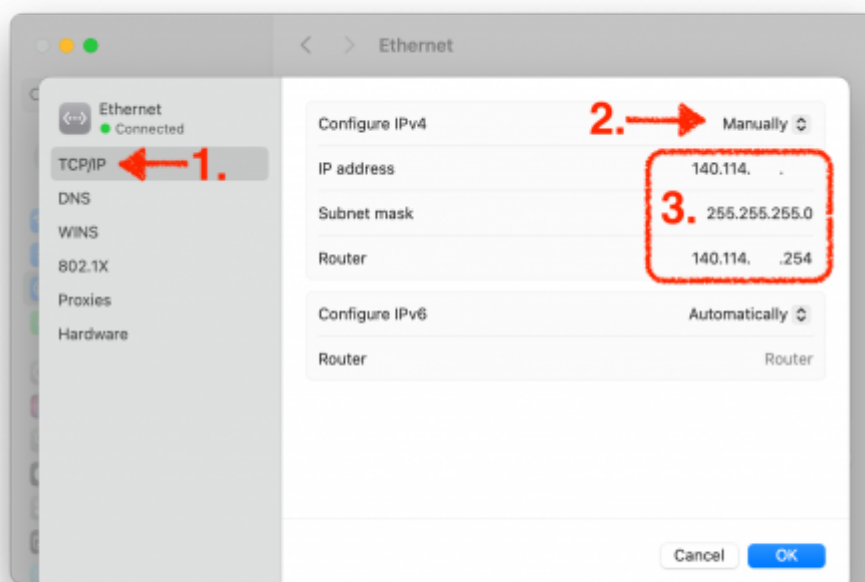

Step3

- Click “Details...”. As shown below:

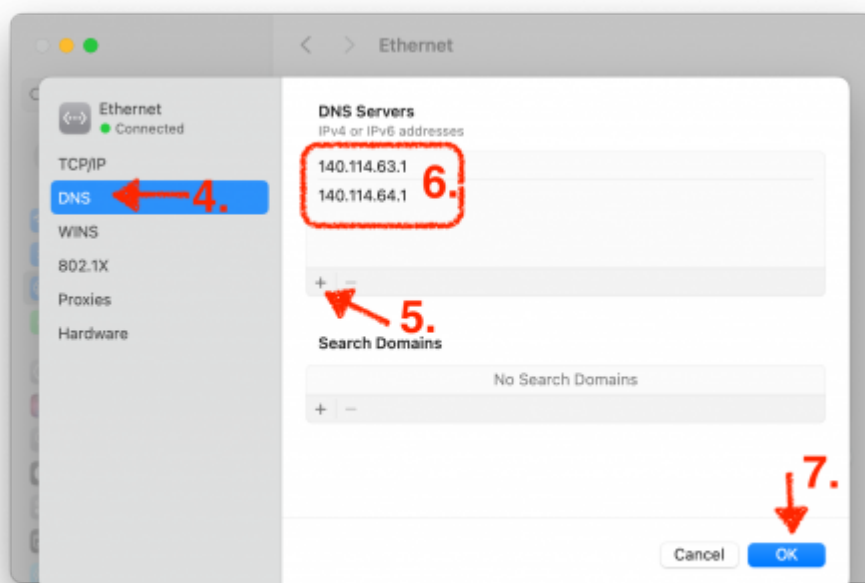

Step4

- 4-1: click “TCP/IP” on the left
- 4-2: set IPv4: Manually
- 4-3: After [Dormitory Network Application Process](#), the given IP address, subnet mask, and preset gateway (equivalent to router) are filled in in sequence, as shown below:

- 4-4: click “DNS” on the left
- 4-5: click “+”
- 4-6: enter “140.114.64.1” and “140.114.63.1”
- 4-7: click “OK”, as shown below:

Step5

- The TCP/IP setting is completed. Try to see if you can access the Internet!
