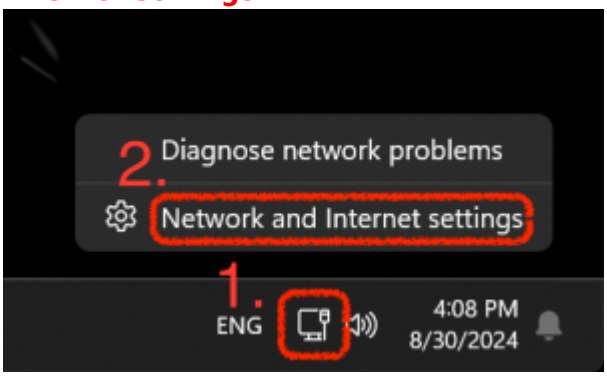
Network config - TCP/IP settings

Description:
The following example is based on Microsoft Windows 11(23h2) Enterprise(In-campus Authorized Software)!
Windows 8/10 users check HERE.
macOS Sequoia 15.x users check HERE.
WiFi Router users check HERE.

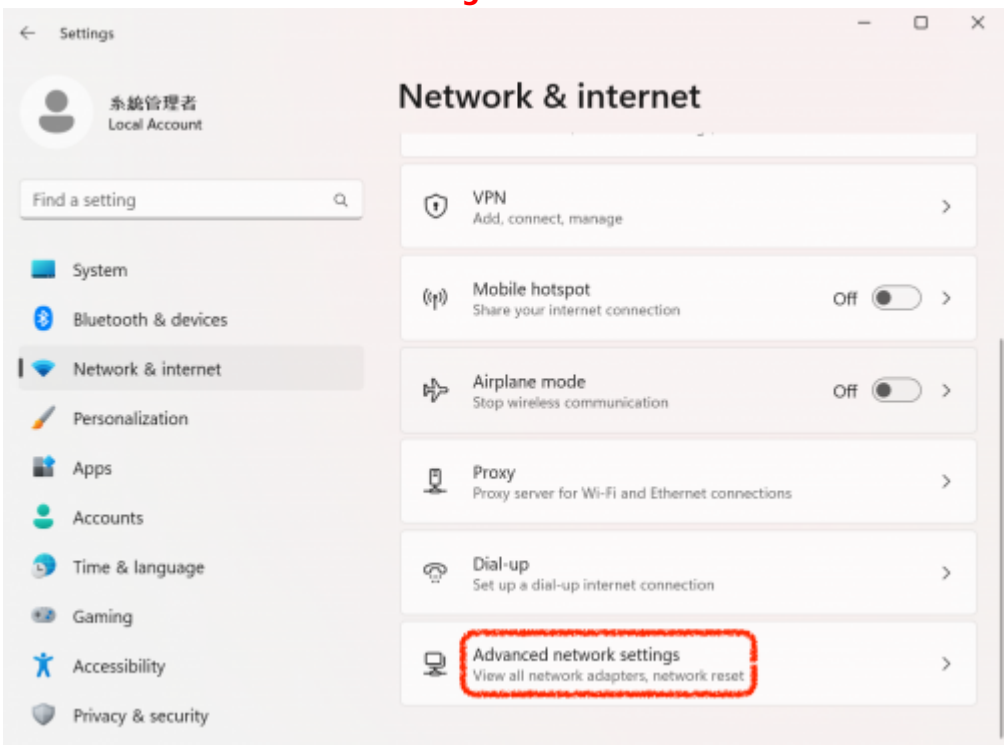
Step1

- Click on the network icon in the lower right corner of the screen, then click the "**Network & Internet settings**".



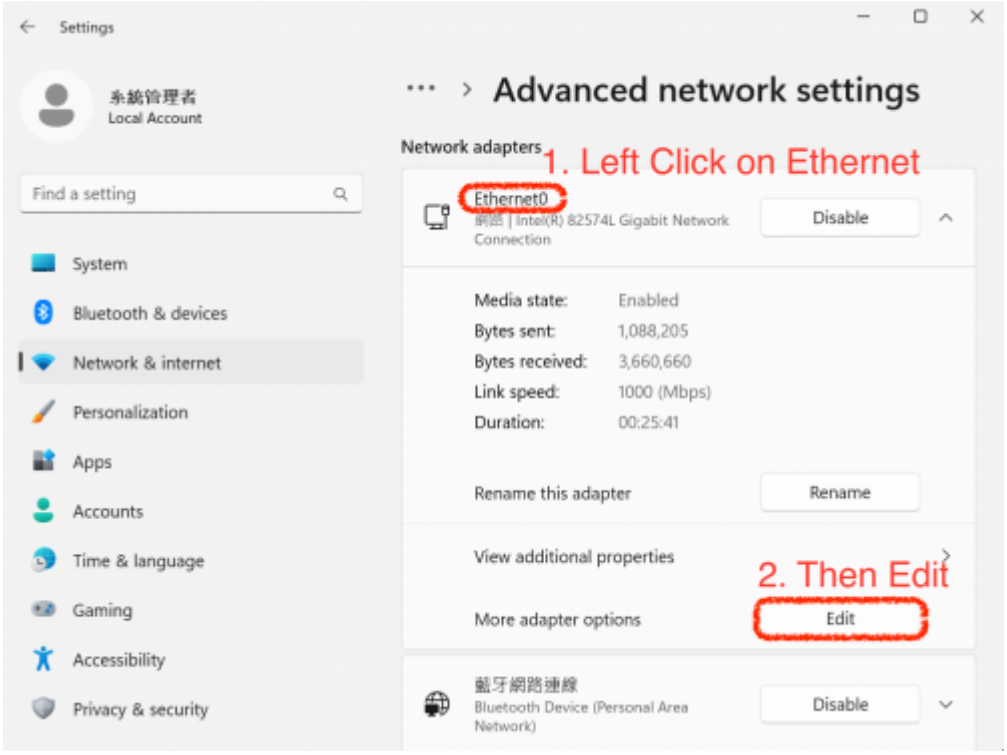
Step2

- Click "**Advanced network settings**".



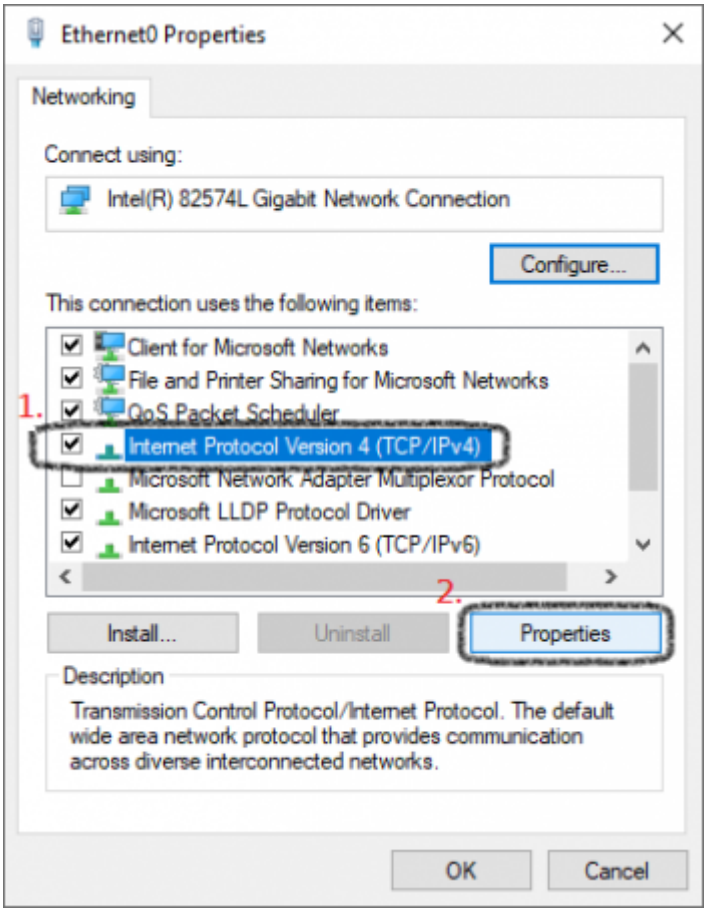
Step3

- Left click on “**Ethernet**”, then Edit “**Properties**”.



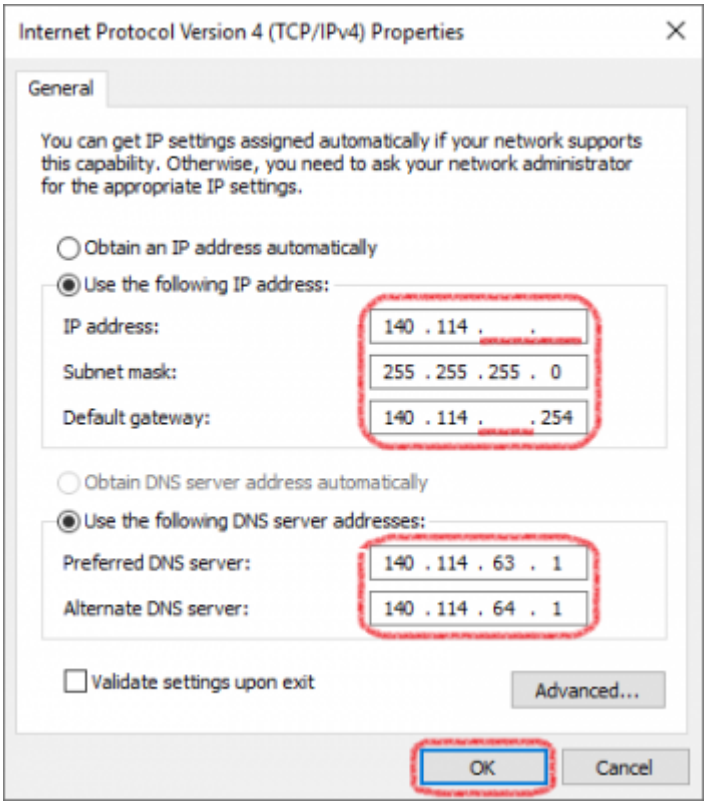
Step4

- Find and select “**Internet Protocol Version 4 (TCP/IPv4)**”, then click “**Properties**”.



Step5

- Fill in your Dormitory Network TCP/IP settings and don't forget to click “**OK**”.
- Subnet mask is **255.255.255.0**, do not input **255.255.0.0**!
  Although you can freely open any website you like, except the **NTHU related page(140.114.*.*)**.



Step6

- Network config completed, feel free to connect the Internet.
