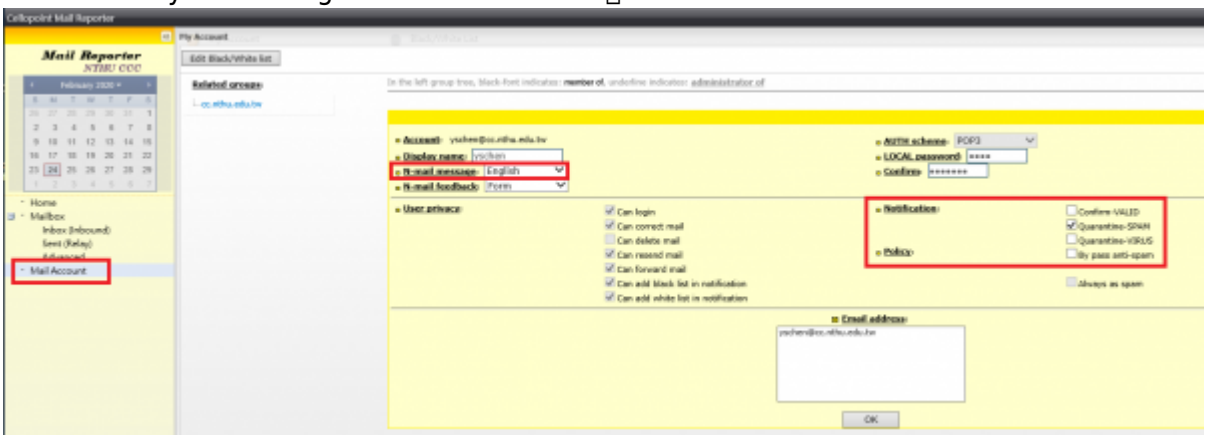
How Do I Activate or Deactivate the Spam Filter?

Through the anti-spam service provided by the Center, the user can decide whether or not to activate spam filtering through the mail reporter (**activated by default**). **If deactivated, all mails will be accepted, except those on the blacklist**.

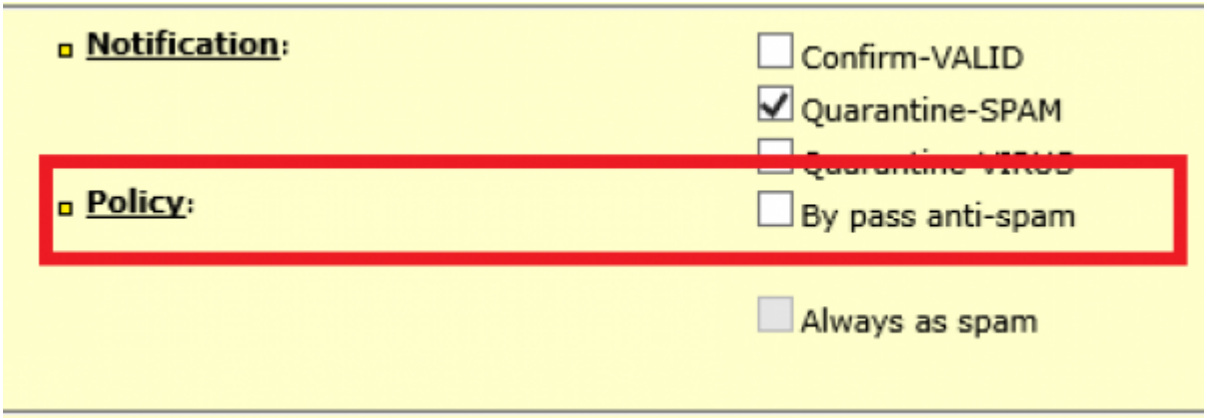
- NOTICE If you select “By pass anti-spam” no spam mail will be filtered. **Please do not report missed spam to the vendor** to avoid unnecessary trouble. Thank you!

Activating or Deactivating the Spam Filter

1. Log in to Mail Reporter.
2. Click **“Mail Account”** in the left column.
3. Check “Policy” on the right side of the screen



4. **If you do not wish to activate the spam filtering function, check the box for “By pass anti-spam”**; if you wish to activate it, then uncheck that box.



5. Click “OK” at the bottom to complete configuration.
