□Vulnerability Alert□ Privilege Escalation Vulnerability in Cisco Integrated Management Controller (CVE-2025-20261)

- Subject: □Vulnerability Alert□ Privilege Escalation Vulnerability in Cisco Integrated Management Controller (CVE-2025-20261)
- Description:
 - Forwarded from Taiwan Computer Emergency Response Team / Coordination Center TWCERTCC-200-202506-00000002
 - Cisco's Integrated Management Controller (IMC) is a management tool designed for Cisco Unified Computing System servers, providing remote monitoring, configuration, and management capabilities. A critical security vulnerability (CVE-2025-20261, CVSS: 8.8) has recently been disclosed. This vulnerability exists in the SSH connection handling and allows authenticated remote attackers to escalate privileges to access internal services.
- Affected Platforms:
 - UCS B-Series Blade Servers
 - UCS C-Series Rack Servers
 - UCS S-Series Storage Servers
 - UCS X-Series Modular System
- Recommended Actions:
 - Please refer to the official advisory for updates:
