[Vulnerability Alert] Two Significant Security Vulnerabilities in Microsoft SharePoint Server

- Subject: [Vulnerability Alert] Two Significant Security Vulnerabilities in Microsoft SharePoint Server
- Content:
 - Forwarded from Taiwan Computer Network Emergency Response Team/Coordination Center TWCERTCC-200-202507-00000014
 - Microsoft SharePoint Server is an enterprise-grade collaboration platform that provides document management and team collaboration features, making it a core platform for enterprise information integration.
 - [CVE-2025-49704, CVSS: 8.8] This is a code injection vulnerability that allows an authenticated attacker to execute arbitrary code remotely.
 - [CVE-2025-53770, CVSS: 9.8] This is an untrusted data deserialization vulnerability that allows an unauthenticated attacker to execute arbitrary code.
 - In addition, according to current intelligence, CVE-2025-49704, CVE-2025-49706, and CVE-2025-53770 in Microsoft SharePoint have been exploited by hackers. Please complete the update as soon as possible and check for any abnormal access.
- Affected Platforms:
 - Microsoft SharePoint Enterprise Server 2016
 - Microsoft SharePoint Server 2019
 - Microsoft SharePoint Server Subscription Edition
- Recommended Action:
 - Apply patches according to the solutions released on the official website:
 - [CVE-2025-49704] <https://msrc.microsoft.com/update-guide/vulnerability/CVE-2025-49704>
 - [CVE-2025-53770] <https://msrc.microsoft.com/update-guide/vulnerability/CVE-2025-53770>
