[Vulnerability Alert] Two Major Security Vulnerabilities Found in Veeam Backup and Replication Software

- Subject: [Vulnerability Alert] Two Major Security Vulnerabilities Found in Veeam Backup and Replication Software

- Content:
  - Forwarded from Taiwan Computer Network Emergency Response Team/Coordination Center TWCERTCC-200-202510-00000005
  - Veeam Backup and Replication is Veeam's core backup software. Veeam recently issued a major security vulnerability advisory.
  - [CVE-2025-48983, CVSS: 9.9] This vulnerability exists in the Mount Service of Veeam Backup and Replication, allowing a domain-authenticated user to execute remote code on the backup infrastructure host.
  - [CVE-2025-48984, CVSS: 9.9] This vulnerability allows a domain-authenticated user to execute remote code on the backup server.
- Affected Platforms:
  - Veeam Backup and Replication versions prior to or including 12.3.2.3617
- Recommended Action:
  - Update to Veeam Backup and Replication version 12.3.2.4165 or later
