

Changing Campus Wireless LAN Account Password

There are currently two methods for changing the password for a Campus Wireless LAN Account. The applicant can choose one of the two, depending on their situation:

1. **Setting a new password through the Academic Information System:** All faculty, staff and students who can log in to the [Academic Information System](#), can change the password of their Wireless LAN Account. ([Description](#))
2. **Setting a new password using the Wireless LAN Account password:** If you have not forgotten the Wireless LAN Account password, [Reset password](#) may be used. (NTHU IP only)
3. **Written application:** Download and fill in the “[Application Form for Campus Wireless LAN Accounts for Faculty, Staff and Students](#)”, and go to the service desk on the second floor of the Computer & Communication Center to process the application. It will take about three working days after delivery.

Once changes have been made through the method above, **the account password will be activated within 10 minutes**. Please see [checking the status of your account and password](#) to ensure that your account is activated or to check other relevant information.
